

## **Unplug & Drive**

**Drive mode On – Most smartphones automatically lock phones while in motion. To prevent disabling function at a stoplight, download an app that will do the same.**

**Use Hands-Free Technology – There are plenty of new vehicle technology features, like Bluetooth pairing, that allow you to keep your hands and eyes focused on the road.**

**Text friends and family when you're on the way to your destination before you get in the car that way they know you'll be driving and unable to communicate for a while.**

**Place the phone in the backseat or in the bag in the trunk to keep your hands off the device.**
